

PI Portacab LLP

PORTABLE CABINS / PREFAB STRUCTURES

Space, ready for what comes next.

Purpose-built portable spaces for work, utility and stay.

PI PORTACAB LLP

Built around your requirement

portablecabinpune.com

THE COMPANY

Practical spaces. Thoughtful execution.

PI Portacab LLP manufactures portable cabins and prefabricated structures for industrial, infrastructure, commercial and hospitality applications.

WHAT WE FOCUS ON

01

APPLICATION FIRST

A site office, security post and resort room need different layouts. We start with the intended use.

02

TAILORED CONFIGURATION

Size, openings, interior fit-out and utility provision are considered against the actual site.

03

FACTORY-FINISHED DELIVERY

We plan fabrication, finishing, movement and installation as connected parts of the job.

THE RANGE

A space for every brief.

Select a proven cabin type, then define the details that make it fit your operation.

PI PORTACAB LLP

Office & site cabins

Workspaces for project teams and site administration.

PI PORTACAB LLP

Security cabins

Compact guard spaces for gates and access points.

PI PORTACAB LLP

Toilet cabins

Sanitation units planned around access and utility needs.

PI PORTACAB LLP

Farmhouse & resort

Prefab stays with layout and finish choices for hospitality.

PI PORTACAB LLP

GI portable cabins

Steel cabin formats for industrial and commercial use.

PI PORTACAB LLP

Kitchen & food service

Kitchen and restaurant concepts built to an operating brief.

WORKSPACES

An office where the work is.

Portable office cabins can support supervision, administration, meetings and project coordination near the action.

PLAN AROUND THE TEAM

The brief should identify how many people will use the space, the workstations or meeting area needed, entry points, windows, electrical loads and any pantry or washroom requirement.

01

Site office

A compact base for supervisors, drawings and day-to-day coordination.

02

Admin cabin

A more finished workspace for staff, visitors or longer site use.

03

Combined layout

Office, pantry and toilet zones can be planned in one unit when space allows.

To quote accurately

Share the intended size, occupant count, layout sketch, site location and required utilities.

ESSENTIAL SPACES

Small footprint. Clear purpose.

Utility structures work best when the layout responds to the people and services that will use them.

SECURITY CABINS

Plan door position, sightlines, counter or desk, ventilation and electrical points around the actual gate and visitor flow.

TOILET CABINS

Define cubicle count, plumbing inlet and outlet, water source, drainage and cleaning access before finalising the cabin.

KITCHENS & SERVICE SPACES

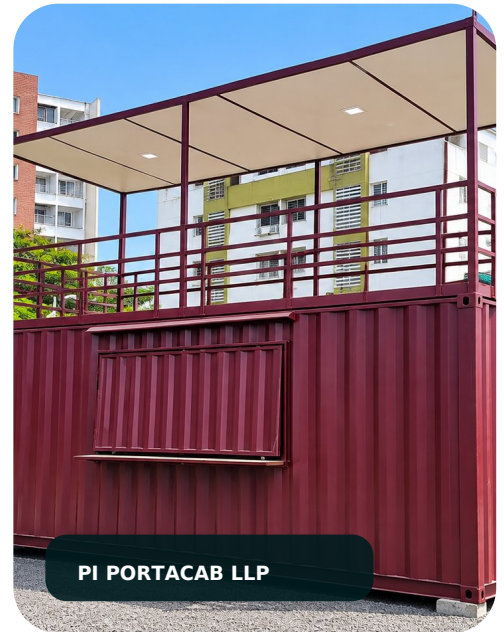

Food-preparation and service cabins need a specific equipment layout. Tell us the cooking process, exhaust requirement, water supply, drainage, electrical load and customer-facing openings. The proposal can then match the operating workflow.

HOSPITALITY

Make room for a better stay.

Prefab cabins can support resort accommodation, farmhouse spaces and leisure projects when site access, services and guest experience are considered together.

DESIGN DISCUSSION

01 Guest use

Sleeping, seating and washroom needs.

02 Site setting

Orientation, access and placement.

03 Finish

Exterior expression and interior feel.

04 Services

Power, water, drainage and climate control.

Illustrative hospitality views. Final design and specifications are agreed project by project.

HOW WE WORK

The right cabin starts with the right inputs.

Every project has different constraints. A short, clear brief helps us propose a workable configuration

01

Understand the use

Application, occupants, duration and operational needs.

02

Define the cabin

Size, layout, materials, openings and services.

03

Agree the scope

Finishes, inclusions, dispatch and site responsibilities.

04

Build & deliver

Manufacture, inspection and planned movement to site.

FOR A USEFUL FIRST QUOTATION

Send the size or available space, intended use, preferred layout, site pin code and utility requirements.
